

## **AMENDMENTS TO THE CLAIMS**

The following is a complete listing of revised claims with a status identifier in parenthesis.

### **LISTING OF CLAIMS**

1. (Original) A method of reproducing a still picture from a recording medium, comprising:

reproducing video data from the recording medium; and

outputting an I-picture and a number of P-pictures as a still picture based on the reproduced video data.

2. (Original) The method of claim 1, wherein the outputting step outputs P-pictures that represent a same picture as the I-picture.

3. (Original) The method of claim 1, wherein the number of P-pictures pictures is greater than 1.

4. (Original) A method of decoding video data to produce a still picture, comprising:

receiving an I-picture and a number of P-pictures representing a still picture; and

decoding the received I-picture and the number of P-pictures to generate display data for the still picture.

5. (Original) The method of claim 4, wherein the receiving step receives P-pictures that represent a same picture as the I-picture.

6. (Original) The method of claim 4, wherein the number of P-pictures pictures is greater than 1.

7. (Original) A recording medium having a data structure for managing reproduction of still pictures, comprising:

a data area storing a data stream representing a still picture such that a reproducing apparatus outputs a I-picture and an number of P-pictures as the still picture when reproducing the still picture from the recording medium.

8. (Original) The method of claim 7, wherein the P-pictures represent a same picture as the I-picture.

9. (Original) The method of claim 7, wherein the number of P-pictures pictures output is greater than 1.

10. (Currently Amended) A recording medium having a data structure for managing at least one still picture, comprising:

a data area storing video data; and

a navigation area, separated from the data area, storing navigation data for ~~a data stream~~ managing reproduction of the video data, the navigation data indicating if the video data ~~data stream~~ includes a still picture.

11. (New) The recording medium of claim 10, wherein the navigation information includes identification information for identifying a portion of the video data including the still picture.

12. (New) The recording medium of claim 10, wherein the recording medium is an optical disc.

13. (New) A method of generating a data stream, comprising:  
generating a data section of the data stream, the data section representing video data; and  
generating a navigation section, separated from the data section, of the data stream, the navigation section representing navigation data, the navigation data including information for managing reproduction of the video data, and the navigation data indicating if the video data includes a still picture.

14. (New) A method of transferring a data stream, comprising:  
sending video data; and

sending navigation data separated from the video data, the navigation data including information for managing reproduction of the video data, and the navigation data indicating if the video data includes a still picture.
